

*Nova*  
*New generation patio awnings*

semi-automatic with remote control. The awning is run out manually by remote control but is connected to a wind detector that automatically retracts the awning in strong winds.

Fully automatic with sun and wind detector. The awning is run out when the sun shines and retracted in strong winds. May be combined with remote control. One of the above combined with a timer.

With several awnings, you may choose between individual control of each awning or simultaneous control of all awnings, or a combination of the two.

#### Environmental Information

The awning may be recycled, with the exception of the awning fabric and some smaller components, such as the stainless steel screws and axles. The awning fabric will emit hazardous fumes if burned. Contact your nearest AMA distributor for more detailed information and information on electrical equipment.

NOVA-system tested by:  
SP (Swedish National Test Institute)  
TÜV Certificate no.: 560006918

Nova Marcesa Cassette

**Material**

The frame is made of powder-coated, extruded aluminium profiles. Fittings are made of die-cast aluminium (arm fittings, for example) or polymer materials (end caps, for example). Screws and axles are of stainless or galvanized steel, or of oil-hardened bronze. Arms are equipped with built-in springs. Frame in white RAL 9010 as standard, but may be special-ordered in any RAL color.

**Arms**

Arms are available in six lengths, from 125 to 350 cm. The awnings are available in widths up to 7 meters. Awnings may be installed side-by-side for wider areas.

**Fabric**

Masacril fabric of fluorocarbon-impregnated, 100% acrylic. Resistance to light is 7–8 of a possible 8.

**Installation**

Easy to mount to walls or roofs.

**Operation**

Manually by hand crank or with an electric motor controlled by a switch, remote control unit, automatics – or a combination of any of these control alternatives.

**Motors and Automatics**

The awning can be equipped with an electric motor, concealed and protected inside the awning tube. A motorized awning can be controlled in different ways:

- Manually with an indoor switch (included in standard configuration), with an outdoor switch, or by remote control.

# New Nova series.

Sun and heat. It doesn't get any better than that. But sometimes there can be too much sun, both for you and your furniture or fabrics. Professional sun protection solutions from AMA let you decide when to let in the sun's light and heat.

Our new Nova Classic and Nova Marcesa series are innovative new designs, reflecting today's demands for function, design, and construction. Both Nova Classic and Nova Marcesa are discreet, timeless designs that fit seamlessly in every setting.

Nova Marcesa is designed with a fabric beam, which gives a more stable and spacious awning that affords protection from the low rays of the morning or evening sun. Both series are available with or without a cassette for the awning fabric. If you want to protect the rolled up awning from wind and weather, then the cassette model is the ideal choice. The models without a cassette are perfect for wall mounting, protected beneath the eaves.

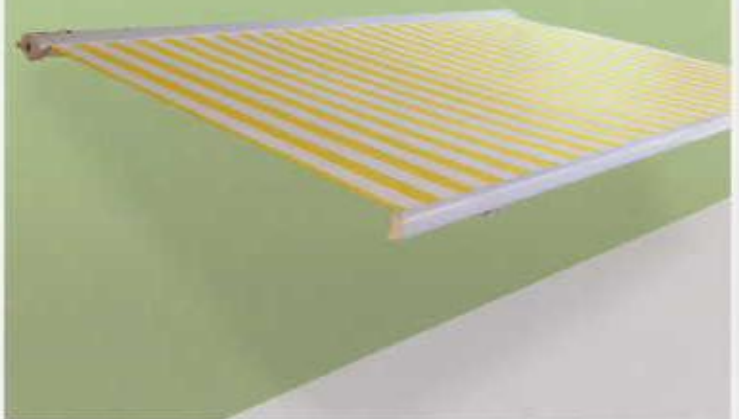

Nova Classic and Nova Marcesa are available in motorized and fully automatic versions. Let the wind and weather control when to unfurl or retract the awnings.

All versions in the Nova series may be fitted with Flexi-arms (except Nova Marcesa Cassette), which allows variable arm-drop angles.

Quality and design are hard to describe with words; you can feel them or see them. And preferably a few years should pass, too... That's when you appreciate your AMA awning most and understand what we mean.

Choosing an awning is a matter of quality and choice, as well as tips, advice, and commitment from someone who cares.

*An awning offers protection against the sun, not against all kind of weather. If a wind or a storm is approaching it must be retracted, likewise in the event of rain (danger of water pocket forming) and snow.*
