AWNING SYSTEMS

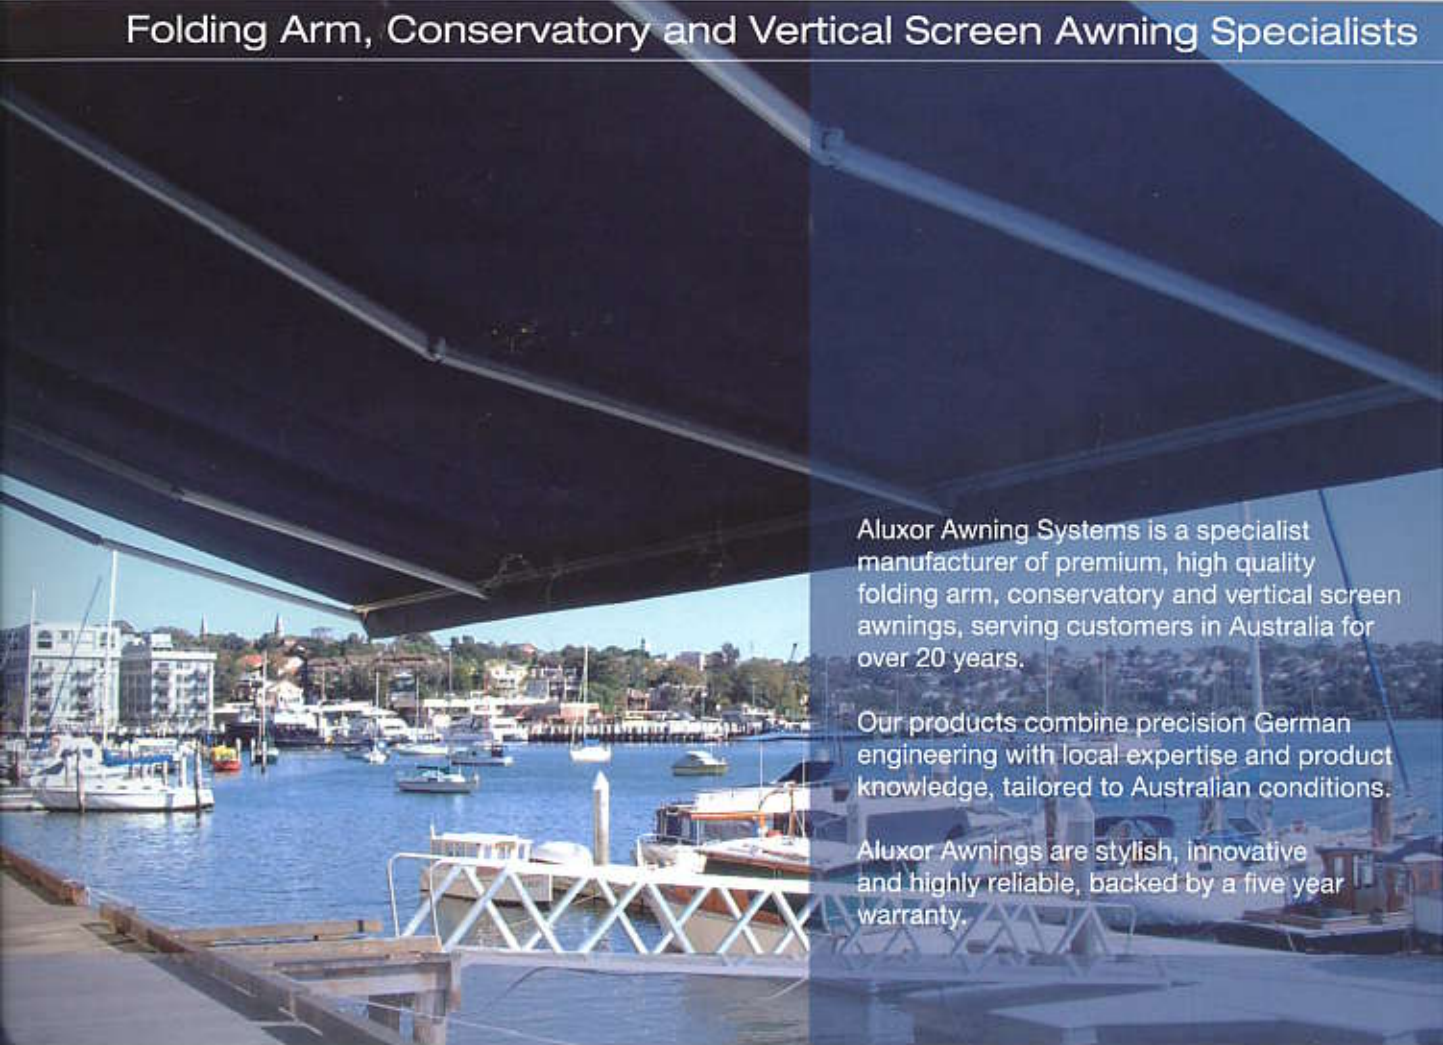

create the outdoor room

Australians take great delight in entertaining and relaxing outdoors. With the benefit of a retractable awning, you can create an outdoor room that protects against the sun or light rain as well as creating a cosy and private ambience.

Ideal for patios, verandahs, balconies and commercial applications such as restaurants, the retractable roof system creates a large pavilioned space free of structures and poles.

As a leading manufacture of awnings, Aluxor is able to offer one of the largest folding arm awnings on the market, extending up to 21 metres wide and 4 metres projection.

Folding Arm, Conservatory and Vertical Screen Awning Specialists

Aluxor Awning Systems is a specialist manufacturer of premium, high quality folding arm, conservatory and vertical screen awnings, serving customers in Australia for over 20 years.

Our products combine precision German engineering with local expertise and product knowledge, tailored to Australian conditions.

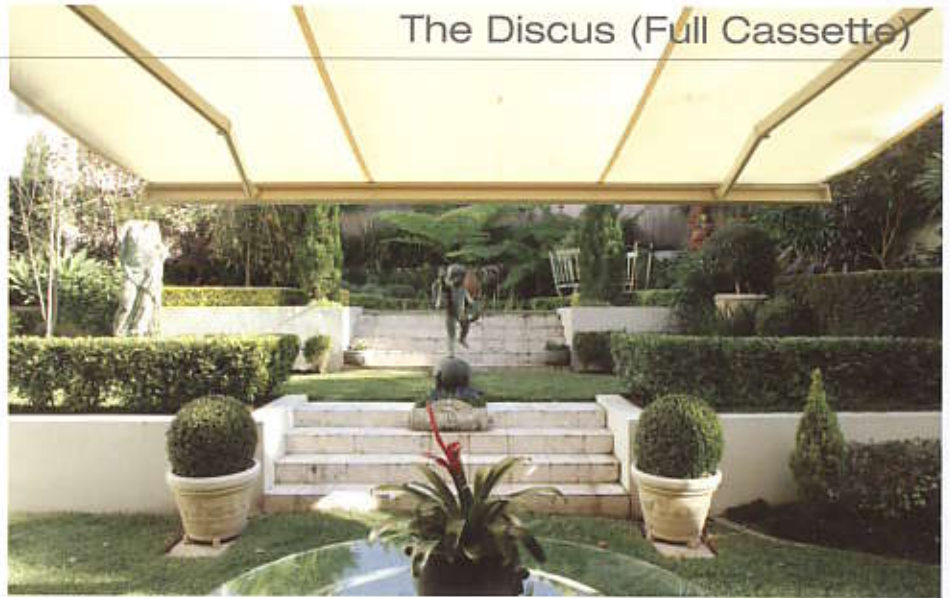

Aluxor Awnings are stylish, innovative and highly reliable, backed by a five year warranty.

folding arm awnings

The **Discus** is a stylish, compact awning, designed for more demanding residential and commercial applications.

The full cassette provides optimal protection for the fabric and working mechanism against dirt, rain and humidity. Its compact design makes it ideal for top fix, face fix or recessed mounting installations.

The arm bracket mechanism is incorporated into the extruded aluminium frame, designed for extra strength and stability.

High grade materials of uncompromising quality

All operating components are designed and manufactured to the standards of an international testing agency TÜV to the European standard.

The **Secuflex 70II folding arms** use tensioned, spring loaded cables that provide added protection against corrosion. They are hung to provide excellent wind stability and fabric tension.

The **Secuflex 70II arms are able to withstand 120,000 cycles** of testing by the Materials Testing Authority of Germany.

Patented pivot ball front bar connector provides the best stability.

Extruded aluminium profiles for pelmets and cassettes provide a long lasting quality that will not rust or vibrate in harsh conditions.

Construction hardware is made of high grade 316 stainless steel.

Powdercoated galvanised steel support bars have a high tensile strength. Pacesetter HP200, 160 microns thick to provide additional strength.

Patented aluminium brackets and components with precision engineering.

Olympian (Full Cassette)

The **Olympian** is a compact light weight design that is suitable for less exposed residential applications, such as a small terrace courtyard or apartment block balconies.

The discreet, full cassette design requires a single cable arm and is suited for top and face fix installations.

The **Toga's** contemporary, unobtrusive design makes it ideal for homes. The semi-enclosed extruded aluminium cassette protects the mechanism and fabric against dirt and corrosion.

The Toga also can be adapted to incorporate our special **Oversquare** design whereby the awning can project to a distance that is greater than its width. This offers a smart way to squeeze a deep projection into a narrow space such as courtyards in inner city housing.

Automation & Fabric

Aluxor use motors and other automation features supplied by Somfy of France. Automation options include the choice of wall switch or remote control and the inclusion of sun, wind and timer systems to automate the awning retraction.

A wide selection of plain and patterned acrylic and plastisol coated fabrics is available.

Stratos III (Semi Cassette)

Stratos III is a slimline design whose elegant, unobtrusive appearance suits both residential and retail applications, including recessed installations.

The extruded aluminium cassette protects the fabric bundle to keep it looking vibrant.
