

# aluminium awnings

FIXED AND ADJUSTABLE

Panels can be closed for optimum privacy and sun protection.

The Louvre awning provides excellent protection from the elements, whether sun, wind or rain; the sturdy aluminium construction promises years of trouble free use. Should any of the panels be damaged, the design also provides for easy panel replacement without removing the awning.

In addition to weather control, the awning's all-over window cover acts as a safeguard against accidental window damage (from falling branches, children playing ball games etc.) This awning is available in a Fixed and an Adjustable style.

An opened Adjustable Awning offers a view while allowing a cooling breeze.

## DURABILITY

Aluminium is one of the most versatile and durable materials for building and construction. Aluminium offers a high resistance to corrosion and weathering and requires minimal maintenance for your convenience.

## FUNCTION

Keeping a home cool in summer can be a problem. Windows offer very little resistance to heat flow. When a house gets hot it is because heat is transmitted through unprotected or poorly protected windows. The best way of reducing heat flow through a window is to stop the heat from reaching that window. CSIRO\* tests prove that aluminium awnings can deflect up to 90% of the heat normally transmitted through a window when installed close to the window.

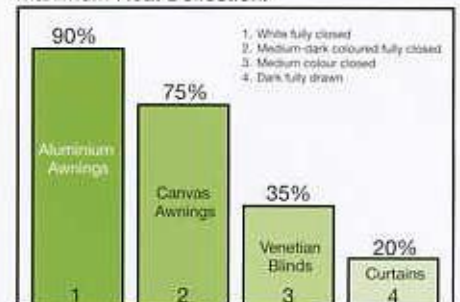

## OPTIONS

The Adjustable model features an easy-to-use handle that allows you to widen or narrow the angle of the awning panel, providing a cooling breeze while excluding the sun or rain. This handle can be installed either inside or outside your home. The panels can be opened to allow almost uninterrupted views or closed for maximum protection and privacy.

In hot/wet weather the panels can be angled to offer the best compromise between protection and view.

Maximum Heat Deflection.
